

Feature trajectory schematics — S&B Replication (VRDots, Meta Quest 3)

--- Translating field role (GREEN dashed)
 — Non-translating field role (RED solid)
 Translation window

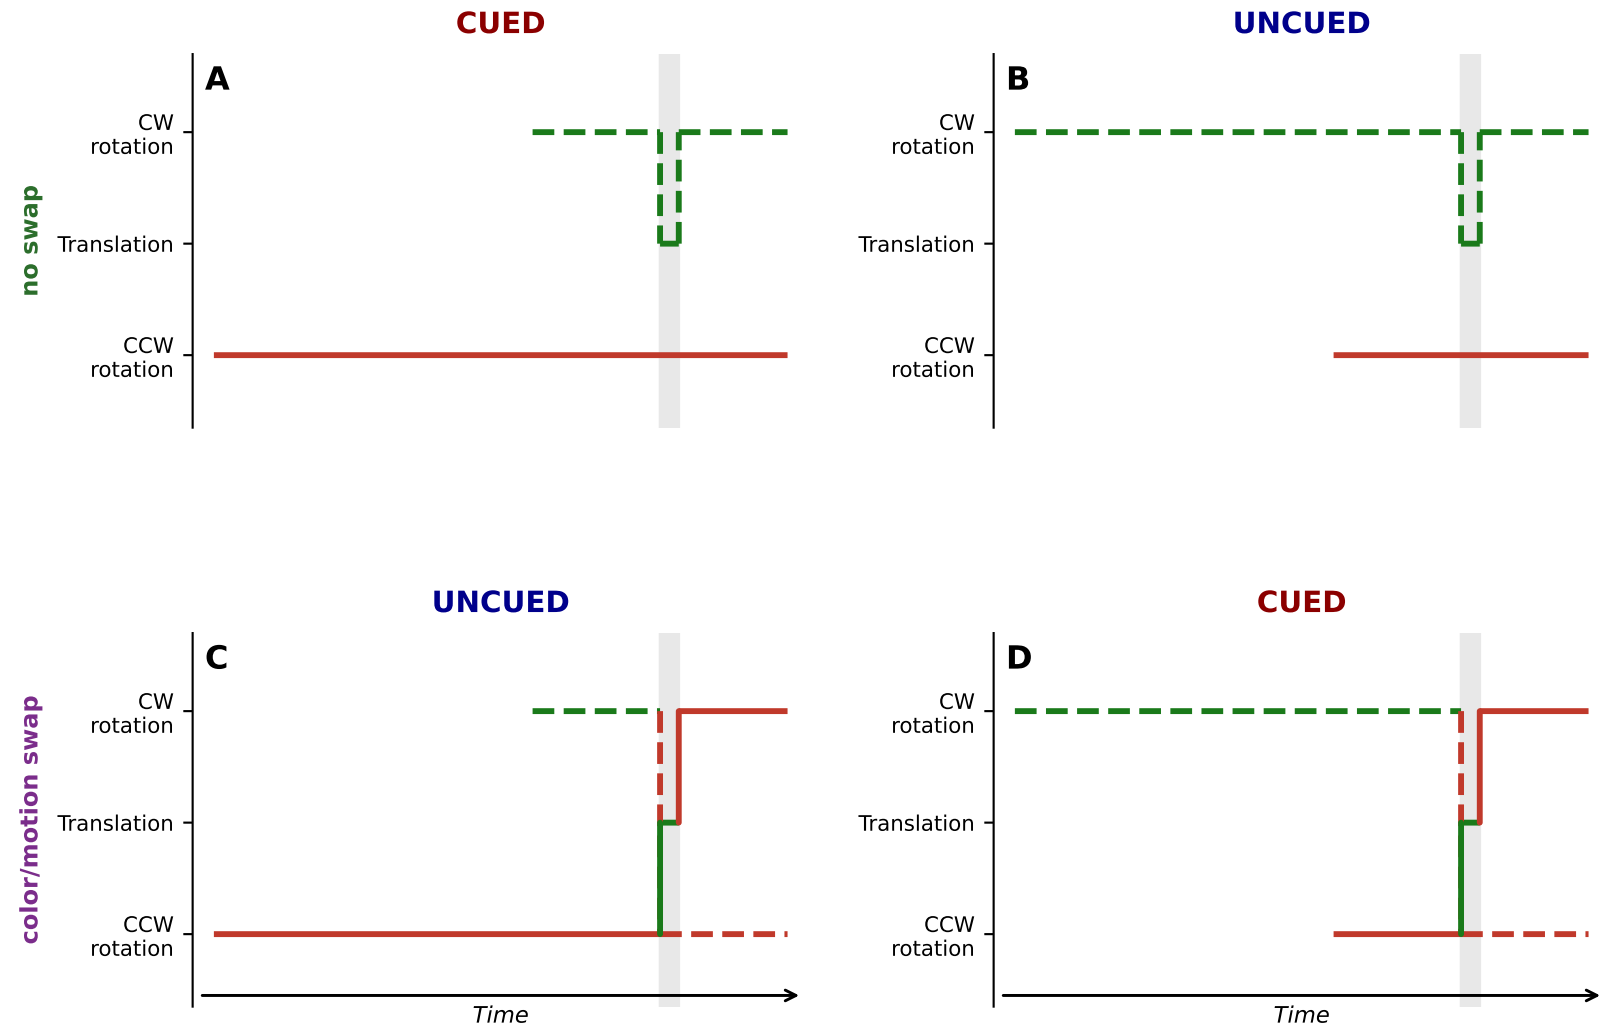

Figure 1. Delayed-onset design with color/motion swaps (Stoner and Blanc, 2010).

Feature trajectories of dots. Dots are distinguished by line style (dashed vs solid) and color.
 Motion type (i.e. clockwise, counterclockwise, or translation) is given by vertical position.
 A) “Cued Translation”: delayed dots translate. B) “Uncued Translation”: always-on dots translate.
 C) “Uncued Translation”: always-on dots translate. D) “Cued Translation”: delayed dots translate.
 See Stoner & Blanc (2010) for further explanation.
