

## Color

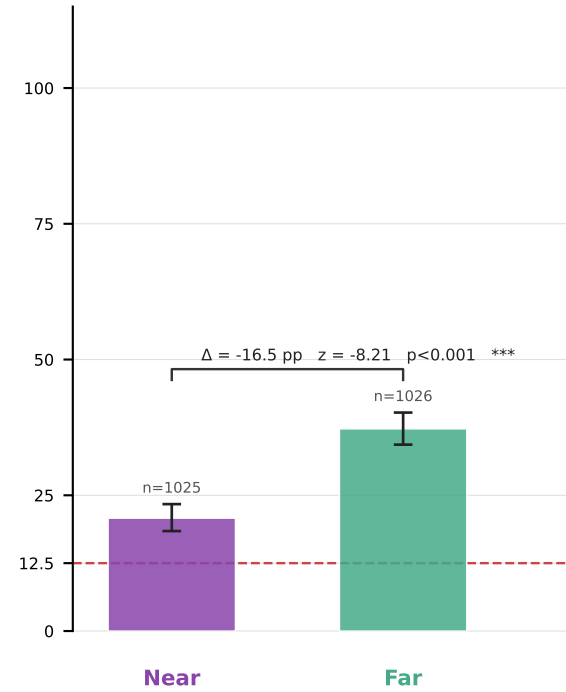

Color of the translating dot field

## Rotation

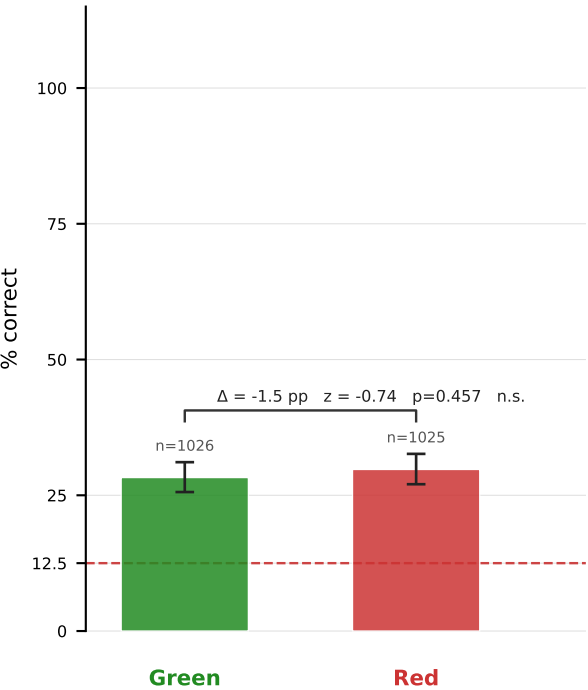

Pre-translation rotation direction of the translating field  
(during translation the dots translate, not rotate;  
label reflects rotational identity before/after the window)

## Depth

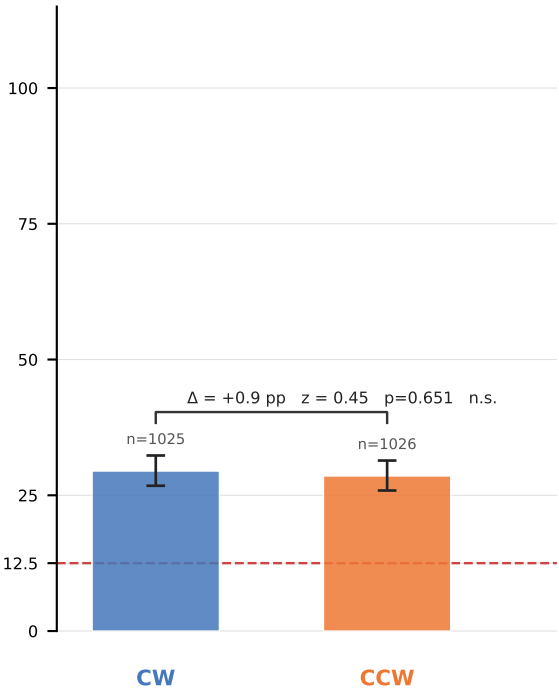

Depth plane of the translating field at onset  
(onset depth; in Z/CZ conditions depth swaps at tStart)

Color

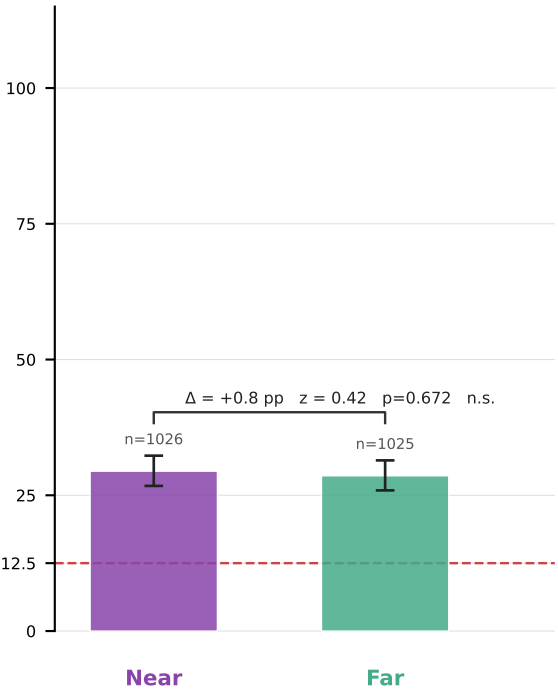

Color of the delayed-onset dot field (Field B)

Rotation

Pre-translation rotation direction of the delayed-onset field (Field B)  
(perfectly correlated with translator rotation for CUED trials;  
perfectly anti-correlated for UNCUEd trials)

Depth

Depth plane of the delayed-onset field (Field B) at onset
