

DecoupledDots — representative stimuli per swap condition

CUED / UNCUEd pairs matched: post-onset tracks identical; only the pre-onset gap differs

Red solid = translator field · Green dotted = rotator field (colors may swap at tStart in C / CZ conditions)

Depth track: lines jump at tStart in Z / CZ conditions · Near/Far asymmetry in Z noted below

Translator field (Red/CCW) — delayed in CUED · Rotator field (Green/CW) — delayed in UNCUEd

* = delayed field at onset (absent before gap) · ► = translating field (identical across CUED/UNCUEd pair)
