

Density series stimuli — single-frame snapshot (both fields superimposed, static)

VRDots: aperture 7° diam (3.5° radius), 1.1° central exclusion radius, dot diam = 0.08°

For comparison — Stoner & Blanc (2010): $\sim 2^\circ$ radius aperture, ~ 5 dots/deg², 63 dots/field, 40 ms translation | Catek et al. (2022): 1.65° radius aperture (3.3° diam), 5 dots/deg², 43 dots/field, 133 ms translation

63 dots/field
(~ 1.8 dots/deg²)

173 dots/field
(~ 5.0 dots/deg²)

500 dots/field
(~ 14.4 dots/deg²)

1000 dots/field
(~ 28.8 dots/deg²)
