† Db: labels flipped to onset-cue-consistent convention. Full dot-membership reversal (S0↔S2, S1↔S3): 'CUED' = trial where onset-cued dots (S2) continue translating.

‡ CMSwap & HighDens assets predate fixationScaleFactor field→ Unity C# default=1.0→ outerDiam=1.8°×1.0=1.80°. These may also predate the PNG-sprite fixation build; actual displayed fixation uncertain.

n.r. = not reported in paper. All our data: single observer (GS), small n— interpret with caution. MCvsDb N baseline from pooled Catek+CatekExact sessions (n=473).

Significance: *** p<.001 ** p<.01 * p<.05 † p<.10 n.s. p≥.10 (two-sided z-test on proportions).
