

Peak Density (N=500/field) — N / Color Swap / Motion Swap
Red solid = Field A (pre-swap: CCW rotation) · Green dashed = Field B (pre-swap: CW rotation)
COLOR SWAP: line colors exchange at t_start; y-positions unchanged
MOTION SWAP: line y-positions jump at t_start (CCW↔CW); colors unchanged
Shaded band = 80 ms translation window · Dotted vertical = Field B onset (750 ms)

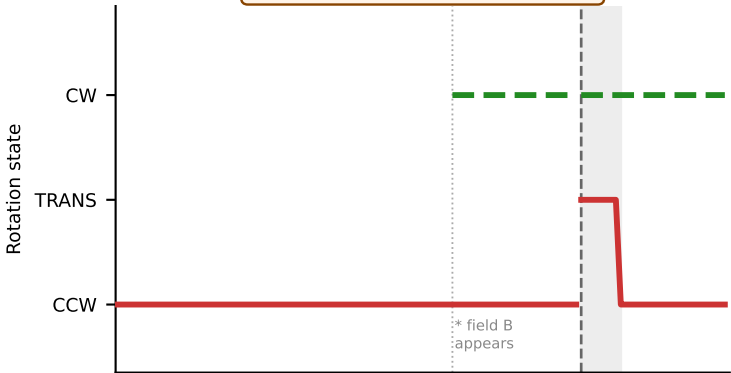

CUED arm
(observer reports Field A = delayed onset field)
