

Feature Trajectories — N / D / Da / Db / MC × CUED / UNCUED  
Actual stimulus colors (Sub0/Sub1=RED, Sub2/Sub3=GREEN) · TB→TS identical in both columns  
Base on Exp1 FieldSwap\_CatekExact.asset + ExpSpecTestPhase.cs

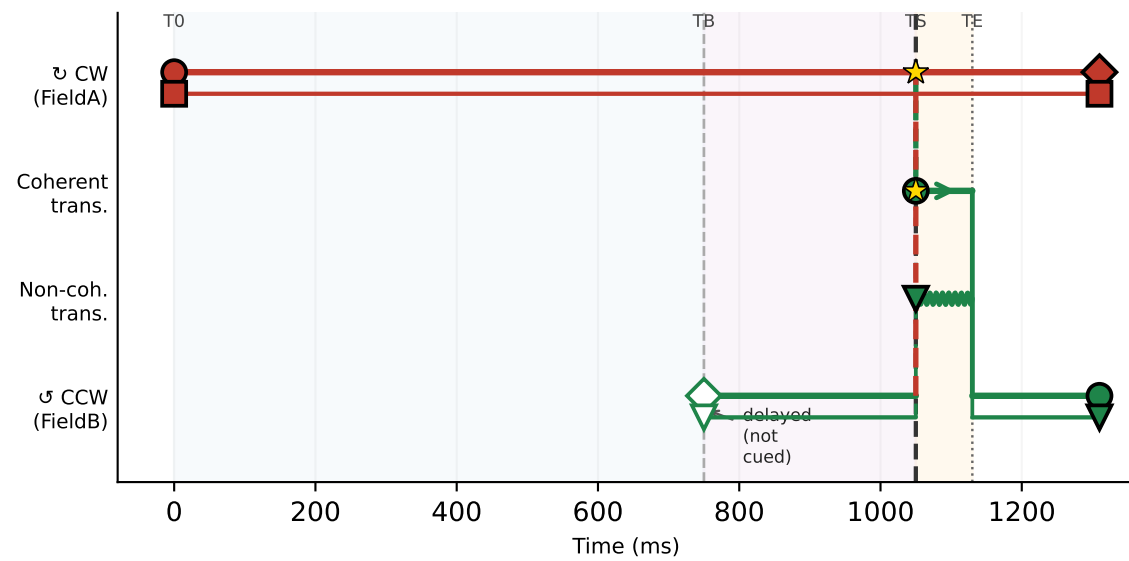

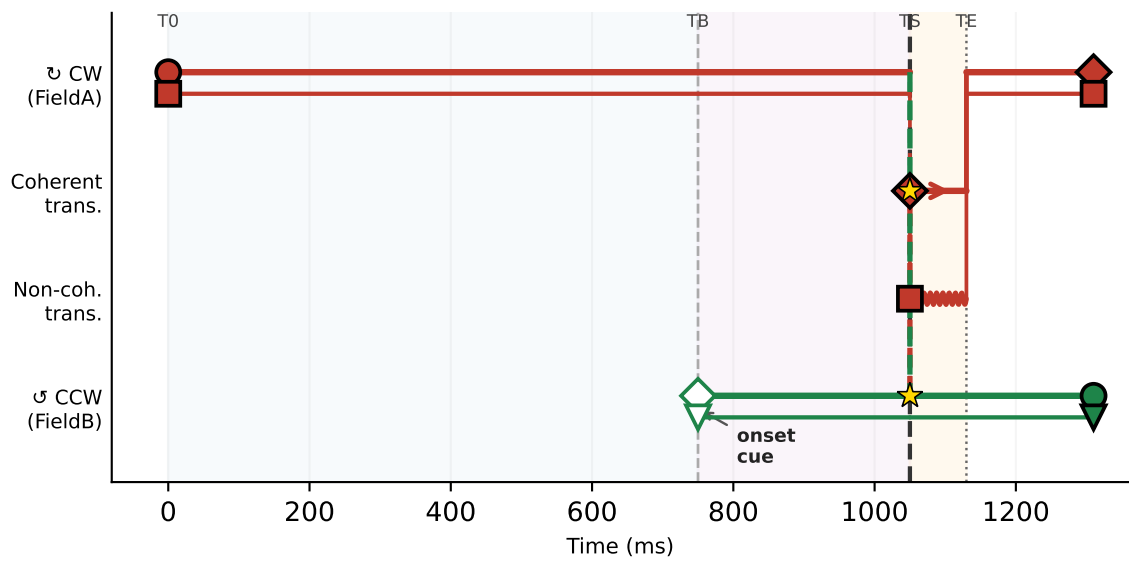

N — No swap

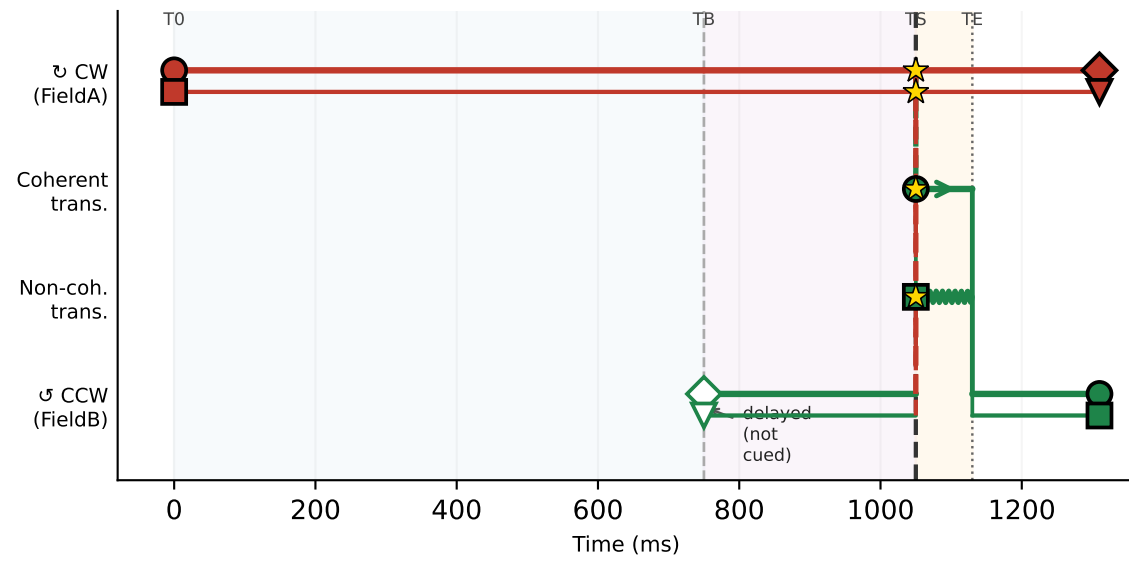

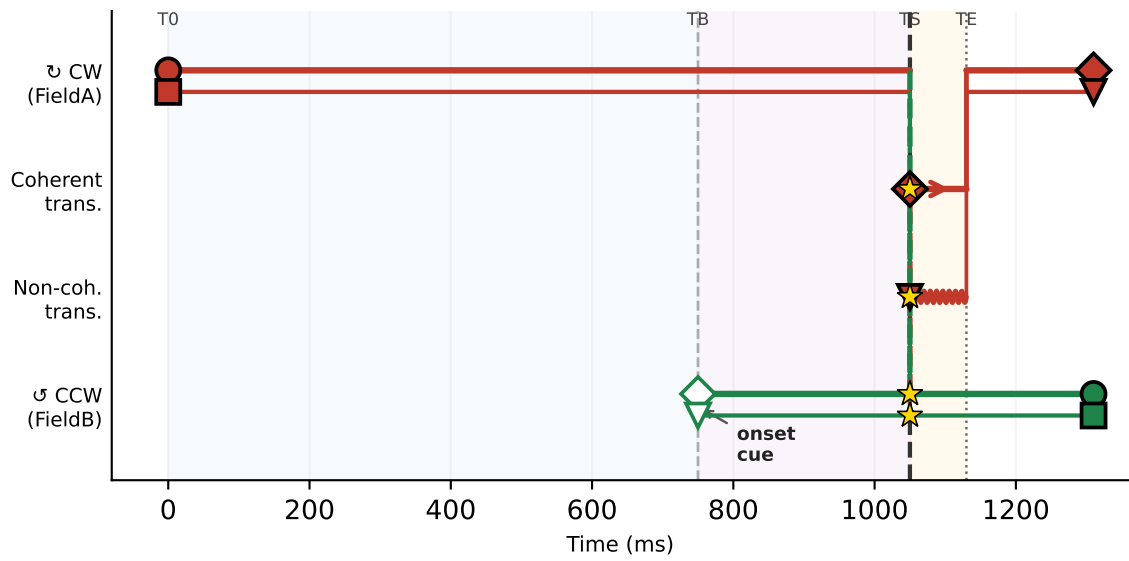

D — Noise-half swap

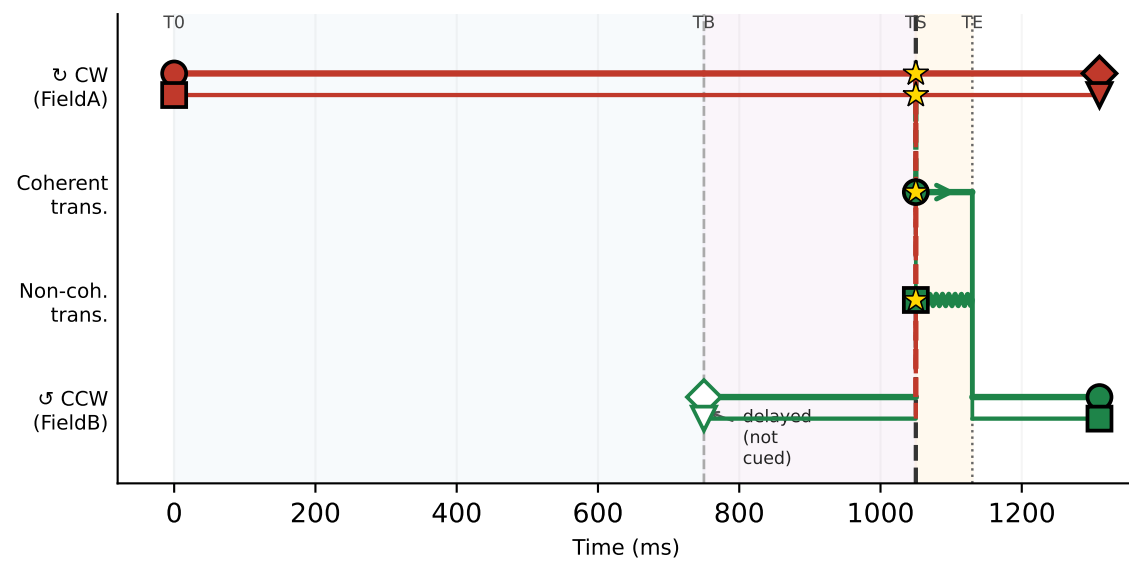

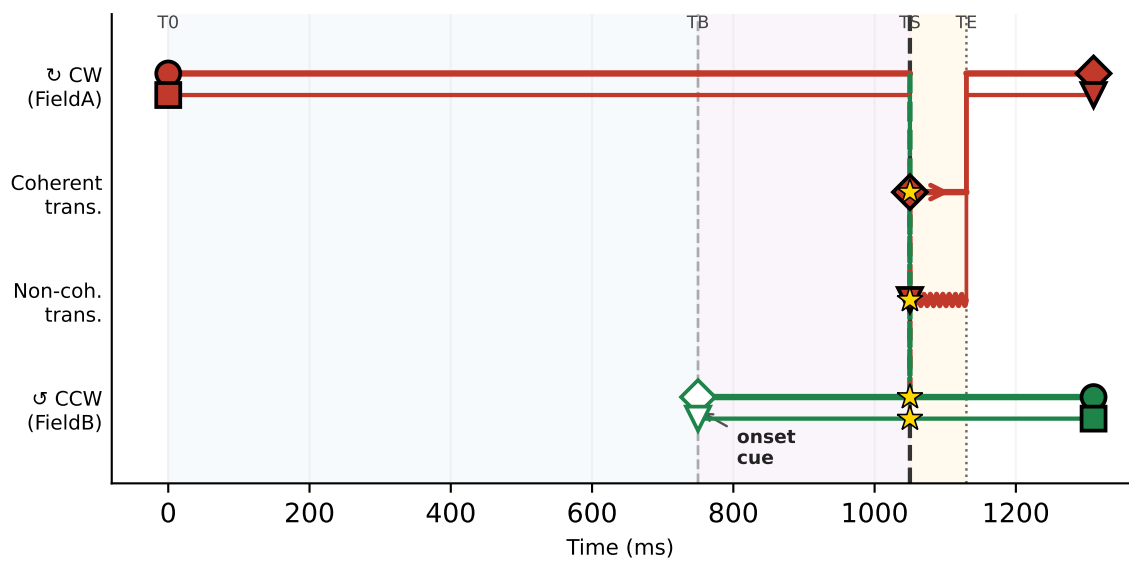

Da — Coherent-half swap  
(onset-cue: labels flipped from booking)

Db — Full subfield swap  
(onset-cue: labels flipped from booking)

MC — Motion + Color swap  
(Catek / S&B replication)

Actual stimulus colors · Onset-cue convention · Da/Db booking labels flipped

|                                                     |                                                      |                                                        |
|-----------------------------------------------------|------------------------------------------------------|--------------------------------------------------------|
| RED = Sub0 / Sub1 (FieldA, CW, always-on)           | Sub2 FieldB-coherent                                 | dashed vertical: subfield crosses to other field at TS |
| GREEN = Sub2 / Sub3 (FieldB, CCW, delayed-onset TB) | Sub3 FieldB-noise                                    | solid → arrow: coherent translation direction          |
| ● Sub0 FieldA-coherent                              | open marker = delayed onset at TB                    | wavy: non-coherent translation                         |
| ■ Sub1 FieldA-noise                                 | ★ color burst: subfield adopts new field color at TS | ◇ swap diamond (D only): noise sub crossed at TS       |
